# Niranjan Kumar Potter

**Senior Integration Engineer & Architect**

Phone: +91 8562096041 | Email: niranjanpotter1997@gmail.com | LinkedIn: Niranjan Potter

## Professional Summary

Strategic Integration Architect and Senior Developer with 5 years of enterprise experience specializing in Mule ESB and API-led connectivity. Visionary leader in AI-driven integration, architecting scalable agentic workflows using Model Context Protocol (MCP) and MuleSoft Agent Fabric. Expert at transforming business requirements into high-performance technical strategies, with a proven history of managing high-demand environments (5M+ monthly transactions) and driving digital maturity through robust architectural patterns.

## Core Competencies

- **Integration Architecture:** API-led connectivity, microservices, and enterprise service bus (ESB) patterns.
- **API Strategy:** Full lifecycle API management, RAML specifications, and security policies.
- **Cloud Platforms:** Expert knowledge of AWS (S3, Secrets Manager, DynamoDB) and Azure DevOps.
- **SDLC & DevOps:** Automated CI/CD pipelines, MUnit testing, and agile methodologies.
- **Data Transformation:** Advanced DataWeave 2.0 scripting for deep data mapping and performance optimization.
- **AI Agent Orchestration:** Expert in Model Context Protocol (MCP), Agent Fabric, and Agent-to-Agent (A2A) communication patterns.

## Professional Experience

### Tech Mahindra | Senior MuleSoft Engineer

*July 2025 – Present*

**Key Projects & Initiatives:**

- Architected and led the implementation of a high-availability API-led connectivity framework for a major Energy & Utility client, managing 5M+ monthly transactions with 99.9% uptime.
- Designed enterprise-level security patterns and reusable common logging modules across the Mule ESB ecosystem to standardize error handling and audit trails.
- Optimized complex DataWeave 2.0 transformations for legacy system integrations, resulting in a 35% reduction in end-to-end processing latency.
- Spearheaded the migration of legacy APIs to CloudHub 2.0, utilizing Anypoint MQ for asynchronous messaging and improved system decoupling.
- Implemented parallel processing patterns for multi-service orchestration, reducing API response time by 60% for complex data aggregation.

- Developed a custom plugin ecosystem (including json-logger, error handlers, and database utilities) to standardize architecture across 15+ microservices.
- Established comprehensive CI/CD pipelines with Maven and integrated SonarQube quality gates to ensure high code standards.
- Integrated AWS Secrets Manager for secure credential management across 50+ API endpoints.

## Technical Leadership & Strategy

- Mentored junior integration developers on best practices for API design, error handling, and performance tuning.
- Led technical code reviews and architectural design reviews for cross-functional agile teams, ensuring adherence to enterprise integration standards.
- Collaborated with business stakeholders to translate complex requirements into scalable technical roadmaps and API strategy.
- Championed the adoption of AI-driven development practices, reducing time-to-market for complex integrations by 20%.
- Analyze project intake forms and facilitate knowledge-sharing sessions with junior developers.
- Collaborate directly with client business architects to gather requirements and define technical specifications.
- Developed a GraphQL-based billing management system with multi-database support (PostgreSQL, Oracle, IBM DB2) and advanced error handling.
- Designed a composite data aggregation service utilizing AWS DynamoDB and S3 for scalable storage and retrieval.
- Architected an AI-powered customer experience platform integrating real-time data with robust logging.
- Implemented secure payment processing flows with multi-database connectivity.

**NTT DATA (Apisero.inc) | Digital Engineering Senior Engineer**

*May 2021 – July 2025*

- Developed and maintained scalable microservices for diverse retail and finance clients using Mule 4.x and RAML specifications.
- Integrated AWS Cloud services (S3, DynamoDB, Secrets Manager) into integration flows, enhancing data security and cloud-native scalability.
- Automated CI/CD pipelines using Azure DevOps and Maven, reducing deployment cycles by 40% and ensuring high code quality via MUnit testing.
- Collaborated on full-lifecycle API management from design-time in Anypoint Design Center to run-time monitoring via API Manager and Splunk.

## Technical Skills

- **Integration Platforms:** MuleSoft Anypoint Platform, Mule ESB 4.x, CloudHub 2.0, Anypoint MQ, APIkit.
- **Cloud & DevOps:** AWS (S3, Secrets Manager, DynamoDB), Azure Pipelines, Git, Jenkins, Maven.
- **Databases & Languages:** MySQL, Oracle, PostgreSQL, Java 17, DataWeave 2.0, SQL, RAML, GraphQL.
- **Tools:** Splunk, SonarQube, Postman, JIRA, ServiceNow, Anypoint Code Builder.
- **AI & Development:** MuleSoft Agent Fabric, MCP Servers, Windsurf (AI IDE), Dev Agent.

## Certifications & Education

- Salesforce Trailhead: Double Star Ranger (Trailhead Profile)
- Salesforce Certified MuleSoft Platform Architect I & Developer (L1, L2)
- Salesforce Certified Data Cloud Consultant & AI Associate
- Bachelor of Technology (2015-2019)
